

Pre-Anesthetic Blood Screen and Intravenous Fluid Consent

We perform a physical exam on your pet before a procedure requiring anesthetic but some conditions such as liver, kidney or blood disorders that could potentially cause complications during the procedure may only be detected with a blood screen. These screens might also uncover problems at an early stage when treatment may be most effective.

Intravenous fluids (I.V.'s) are also required for a major surgery (such as a spay) or dental procedures. I.V. fluids help maintain blood pressure at a safe level, provide a route for emergency drug administration and aid in recovery for anesthesia.

The combination of blood tests recommended for the apparently healthy younger pet is:

(up to 6 ½ years)

- BUN, Creatinine, ALKP, ALT, Glucose, Total Protein (*kidneys, liver, diabetes, hydration*)
- CBC (*anemia, infection, clotting*)
- Electrolytes (*dehydration*)
- Urinalysis (*kidney, diabetes*) \$158.00 + tax *

The combination of blood tests recommended for the older pet is:

(7 years and older)

- BUN, Creatinine, ALK, ALT, Glucose, Total Protein, Albumin, Total Bilirubin, Phosphorus, Amylase, Cholesterol, Calcium (*kidneys, liver, diabetes, hydration, protein, pancreas, tumors*)
- CBC (*anemia, infection, clotting*)
- Electrolytes (*dehydration*)
- Urinalysis (*kidney, diabetes*) \$198.50 + tax*

In order to encourage the use of I.V. fluids during anesthesia, we are offering it at a reduced price of \$76.00 + tax.

- YES**, I want my pet to have a pre-anesthetic blood screen.
- YES**, I want my pet to have I.V. fluids during the procedure.
- NO**, I do not want my pet to have a pre-anesthetic blood screen.
- NO**, I do not want my pet to have I.V. fluids during the procedure.
- I.V. Fluids are considered mandatory for this procedure.**

- Yes**, I would like a tattoo done (no charge) Decline tattoo
- Yes**, I would like a microchip done (\$68.00 plus tax) Decline microchip

Pet's name: _____ Pet's Age: _____

Owner signature: _____ Date: _____

* The above prices are for voided urine samples. Extra charges may apply if male or female bladder catheterization (\$43.00-\$50.00 + GST) or cystocentesis (\$32.00 + GST) are required.
